

Introduction

- ★ **Virtual Network Computing (VNC)** is a desktop protocol to remotely control another computer.
- ★ It transmits the keyboard presses and mouse clicks over network

Prerequisites

Prerequisites :

- ★ User account on remote machine
- ★ vncserver on remote machine
- ★ vncviewer on ur workstation

Getting Started

★ Starting VNC Server:

Connect to remote machine using SSH/Telnet.

Start **vncserver** on remote comp.

```
# vncserver
```

Note your display number. Set the vnc session password with

vncpasswd command.

Connecting using vncviewer

★ **Some Options:**

★ -geometry --> to set resolution

★ -name --> to set the name to the vncviewer window

★ -kill :[display number]

★ **General command to connect:**

```
vncviewer -[options] [host]:[display]
```

Thank You.
